

# Welcome to the **GANDRUD** Pit Stop

Designed for vehicles equipped  
with the GM Oil Life Monitor System.

Earth-Friendly maintenance  
for your GM vehicle.

## ***Congratulations!***

If your GM vehicle is equipped with an Oil Life Monitoring system, you can be confident in using the Oil Life Monitor indicator as the right time to maintain your vehicle. Refer to your owner's manual for specific model recommendations. You can change your engine oil as often as you'd like. However the Oil Life Monitoring system allows you to extend the time between oil changes.

## ***How does OLM system work?***

The Oil Life Monitor system is a computer based software algorithm that will automatically adjust the oil change interval based on engine characteristics, driving habits and the climate in which the vehicle is operated. For instance, mild highway driving in a warm climate will maximize the interval between oil changes. Depending on the vehicle this could be in excess of 7,000 miles and as high as 12,000 miles. On the other hand, short trip driving in a cold climate may limit the oil change interval to 3,000 miles or less. In general, most people that drive a combination of city and highway will find the Oil Life Monitor system will indicate an oil change every 6,000 to 8,000 miles.

By maintaining your vehicle as indicated by the Oil Life Monitor system you'll not only help the environment by not wasting still useful oil, but you'll also maintain your GM vehicle for maximum fuel economy and dependability.

## ***When and where do I get a Pit Stop?***

A Pit Stop should be made every 60-90 days. At the Gandrud Quick Lube Center a Pit Stop is Fast, Easy, and only \$5.00 per visit. (Includes tax.)

During a Pit Stop we will top off your vehicle fluids as necessary. This includes brake, transmission and power steering fluids, windshield washer fluid, coolant and engine oil. Tire pressure will be checked and set to specifications. We will check the tires for wear, inspect light operation, and do a visual inspection of the vehicle's undercarriage.

Pit Stops are available during normal  
Quick Lube hours:

Monday - Friday: 7:00am - 7:00pm  
Saturday: 7:00am - 2:00pm  
(no appointment necessary)
